What are trauma-focused therapies?

Eye Movement Desensitisation and Reprocessing (EMDR) therapy and other trauma-focused therapies are generally beneficial for patients with post-traumatic stress disorder (PTSD). They are also currently being investigated in patients with other diagnoses who have had exposure to traumatic events.

EMDR therapy involves identifying past events that are causing dysfunction, identifying current circumstances that elicit distress, and desensitising internal and external triggers. During EMDR therapy, patients attend to the emotionally disturbing material in brief sequential doses while simultaneously focusing on an external stimulus, usually therapist-directed lateral eye movements. The therapist may teach the patient a variety of imagery and stress reduction techniques to use during and between sessions. When patients report no distress related to the targeted memory, they are asked to focus on a preferred positive belief instead. Over the course of treatment, patients gain insight about their stressful situations, and the associated emotional distress reduces.

Other trauma-focused therapies include prolonged exposure, which involves cognitive behavioral therapy to teach people to gradually face trauma-related memories, feelings and situations.

What is the evidence for trauma-focused therapies?

Only one study was identified assessing patients with bipolar disorder, which reported improvements in trauma symptoms when compared to treatment as usual. However, this evidence is of low quality as the sample is very small (20 people).

For more information see the technical table

NeuRA

Discover. Conquer. Cure.

NeuRA (Neuroscience Research Australia) is one of the largest independent medical and clinical research institutes in Australia and an international leader in neurological research.

Diseases of the brain and nervous system pose the greatest health, economic and social burden of any disease group because they are chronic, debilitating and have no known cures.

Medical research is the cornerstone of efforts to advance the health and wellbeing of families and the community. Our dedicated scientists are focussed on transforming their research into significant and practical benefits for all patients.

While we hope you find this information useful, it is always important to discuss any questions about bipolar disorder or its treatment with your doctor or other health care provider.

HOW YOUR SUPPORT HELPS

We are able to make significant advances due to the generosity of countless people. Your donation allows us to continue to work towards transforming lives. For information on how you can support our research, phone **1300 888 019** or make a secure donation at neura.edu.au.
