

What are adult life events?

Life events that occur during adulthood are defined as particularly significant experiences that result in substantial changes to personal circumstances. These changes may be positive or they may be negative changes and can occur across all aspects of life, including health, education, employment, relationships, bereavement, housing, legal, and financial issues.

What is the evidence for adult life events?

Moderate to high quality evidence suggests no differences in the number of stressful events experienced prior to onset of bipolar or unipolar depression. There was no evidence from systematic reviews comparing the number of adult stressful events in patients prior to onset of the disorder with healthy controls. See the relapse topic (in course and outcomes) for rates of relapse following adult stressful events.

For more information see the technical table

NeuRA

Discover. Conquer. Cure.

NeuRA (Neuroscience Research Australia) is one of the largest independent medical and clinical research institutes in Australia and an international leader in neurological research.

Diseases of the brain and nervous system pose the greatest health, economic and social burden of any disease group because they are chronic, debilitating and have no known cures.

Medical research is the cornerstone of efforts to advance the health and wellbeing of families and the community. Our dedicated scientists are focussed on transforming their research into significant and practical benefits for all patients.

While we hope you find this information useful, it is always important to discuss any questions about bipolar disorder or its treatment with your doctor or other health care provider.

HOW YOUR SUPPORT HELPS

We are able to make significant advances due to the generosity of countless people. Your donation allows us to continue to work towards transforming lives. For information on how you can support our research, phone **1300 888 019** or make a secure donation at neura.edu.au.
