BIPOLAR DISORDERS LIBRARY

BIPOLAR DISORDERS Factsheet

July 2020

What is mode of administration?

Mode of administration with reference to bipolar disorder usually refers to oral or injection administration. Studies have shown that people with bipolar disorder can relapse due to lack of adherence to prescribed medications. Long-acting injectable medications are a treatment option for those who are not adhering to, or do not remember to take, their prescribed oral preparations. This topic assesses whether injectable medications are more effective than placebo or oral preparations for treating symptoms of bipolar disorder.

What is the evidence for mode of administration for people with bipolar disorder?

High quality evidence suggests a small to medium-sized effect of fewer relapses with long-acting injection second generation antipsychotics than with placebo, with less all-cause treatment discontinuation.

Moderate to low quality evidence found no differences in relapse rates or all-cause discontinuation between long-acting injection second generation antipsychotics and oral antipsychotics or treatment as usual, although prolactin-related adverse events were found less often with long-acting injection second generation antipsychotics.

HOW YOUR SUPPORT HELPS

We are able to make significant advances due to the generosity of countless people. Your donation allows us to continue to work towards transforming lives. For information on how you can support our research, phone **1300 888 019** or make a secure donation at neura.edu.au.

NeuRA

Discover. Conquer. Cure.

NeuRA (Neuroscience Research Australia) is one of the largest independent medical and clinical research institutes in Australia and an international leader in neurological research.

Diseases of the brain and nervous system pose the greatest health, economic and social burden of any disease group because they are chronic, debilitating and have no known cures.

Medical research is the cornerstone of efforts to advance the health and wellbeing of families and the community. Our dedicated scientists are focussed on transforming their research into significant and practical benefits for all patients.

While we hope you find this information useful, it is always important to discuss any questions about bipolar disorder or its treatment with your doctor or other health care provider.
