

NeuRA
Discover. Conquer. Cure.

SCHIZOPHRENIA LIBRARY

SCHIZOPHRENIA Factsheet

February 2020

What is impulsivity?

Impulsivity is a predisposition towards unplanned reactions to internal or external stimuli, without regard to the consequences. Impulsivity is a major feature in a variety of psychiatric disorders.

What is the evidence for impulsivity?

Moderate to high quality evidence suggests increased monetary delay discounting (preference for immediate small rewards over later large rewards) in people with schizophrenia than controls.

NeuRA

Discover. Conquer. Cure.

NeuRA (Neuroscience Research Australia) is one of the largest independent medical and clinical research institutes in Australia and an international leader in neurological research.

Diseases of the brain and nervous system pose the greatest health, economic and social burden of any disease group because they are chronic, debilitating and have no known cures.

Medical research is the cornerstone of efforts to advance the health and wellbeing of families and the community. Our dedicated scientists are focussed on transforming their research into significant and practical benefits for all patients.

While we hope you find this information useful, it is always important to discuss any questions about schizophrenia or its treatment with your doctor or other health care provider.

For further information see the technical table

HOW YOUR SUPPORT HELPS

We are able to make significant advances due to the generosity of countless people. Your donation allows us to continue to work towards transforming lives. For information on how you can support our research, phone **1300 888 019** or make a secure donation at www.neura.edu.au.
