

POST-TRAUMATIC STRESS DISORDER Factsheet

August 2021

How is employment related to PTSD?

Employment status is often indicative of the extent of one's functional ability. Employment outcomes involve rates of employment and success in retaining employment, as well as patient characteristics, their environments, and interventions that influence employment rates.

What is the evidence for employment in people with PTSD?

Moderate to low quality evidence finds lower rates of returning to work in people with post-injury PTSD than in people without post-injury PTSD.

For more information see the technical table

HOW YOUR SUPPORT HELPS

We are able to make significant advances due to the generosity of countless people. Your donation allows us to continue to work towards transforming lives. For information on how you can support our research, phone **1300 888 019** or make a secure donation at neura.edu.au/donate

NeuRA (Neuroscience Research Australia) is one of the largest independent medical and clinical research institutes in Australia and an international leader in neurological research.

Diseases of the brain and nervous system pose the greatest health, economic and social burden of any disease group because they are chronic, debilitating and have no known cures.

Medical research is the cornerstone of efforts to advance the health and wellbeing of families and the community. Our dedicated scientists are focussed on transforming their research into significant and practical benefits for all patients.

While we hope you find this information useful, it is always important to discuss any questions about PTSD and its treatment with your doctor or other health care provider.
